

### To Whom It May Concern

Padova, January 12, 2022

Adnan Latif Gazi is currently enrolled in the Bachelor program (3-years Italian Laurea) in Computer Science at University of Padova, Italy. Adnan is in the third and final year of his program of studies and is approaching the final graduation exam with a very good average score of 27.8/30 for 13 exams out of 20, that puts him in the top 10% among all the Bachelor students in Computer Science (about 180 students enrolled per year). I personally know Adnan because he attended the “Object Oriented Programming” class that I have been teaching in the academic year 2020/2021. As lab project he developed a complex C++/Qt software of the highest quality. He obtained a final score of 30/30 *cum laude* — where the average score for 114 students of that academic year was 24.8/30 — and overall he has proven to be an excellent student with distinguished programming skills.

It is really a pleasure for me to fully support the application of Adnan Latif Gazi for the Fellowship Programme of CERN. I am sure that his skills and commitment make him a top-ranked candidate for participating in this fellowship programme.

Please do not hesitate to contact me if I can be of further help.

Best regards,

Francesco Ranzato
